Patient Counselling

Patient Education is the process by which Health Professionals and others impart information to patients and their Caregivers that will alter their Health Behaviours or improve their Health Status. This is an important part of the healing process no matter the type of illness. Despite diagnosed problems, patient tends to deny treatment due to various myths, misconceptions about time and cost and lack of awareness on possible risks etc. Hence, as a mandate, every patient reporting to our hospital is educated at the Patient Counselling Room present in all Clinical depts. During counselling, it's ensured that every patient is provided information about Oral Health status, comprehensive treatment plan, tentative time duration for the treatment, cost estimates, other treatment alternatives, prognosis, prevention strategies. Any queries is answered in the process.
